THE ARKLAY MOUNTAIN SAFETY ADVISORY

May 24, 1998

Umbrella Corporation is working in close coordination with the Raccoon City Police Department to investigate these wildlife disturbances. Preliminary findings from our internal teams suggest the behavioral changes may be linked to a minor chemical runoff resulting from a localized storage leak.

The corporation confirms that the source of the leak has been fully contained. To ensure the continued well-being of the community and the integrity of the local ecosystem, a specialized "sanitization" sweep is currently in progress.

While these containment efforts are completed, Umbrella Corporation strongly urges all hikers, campers, and local residents to remain strictly on marked trails within the Arklay forest. Adherence to these boundaries is essential until the biotech teams have concluded their final safety protocols.

This advisory underscores our unwavering commitment to the regions in which we operate. As a cornerstone of the global biotech industry, our dedication to stability and security remains absolute.
